

**Samsung 85-Inch U9B Bendable TV**

Try to bend most televisions and you'll end up with hands full of shrapnel and a voided warranty. This doughy display—which will be available to consumers later this year—transforms from a flat-screen to a curvaceous display that provides IMAX-like periphery fillage and added dimension. Or just a warm hug. **\$TBD, [samsung.com](http://samsung.com)**

**Cobra JumPack**

A portable battery pack that can charge your phone or tablet? Yawn. A 7,500 mAh portable battery pack that's got enough juice to jump-start your car? Never stick your clamp in another man's engine again. **\$130, [cobra.com](http://cobra.com)**

**3D Systems ChefJet**

Sure, the 3D printing revolution means we could clone our rarest action figures. But unless you can metabolize plastic, you can't eat the output. That. Changes. Now. The ChefJet works with sugar, so users can build delicious confections. (Oompa Loompas not included.) **\$TBD, [3dsystems.com](http://3dsystems.com)**

Now you see me, now you... still see me.

**ClearView Clio**

Goodbye, grates! This Bluetooth speaker is built around a sheath of clear curved acrylic glass. Of course, that pane ain't just for looks: It pushes sound in multiple directions for room-filling booms. Who knew invisibility could look (and sound) so good? **\$349, [clearviewaudio.com](http://clearviewaudio.com)**

**Sony Xperia Z1<sup>s</sup>**

Presenting...the partyproof phone! Not only is it water/spill/toilet/beer/Red Bull/jungle juice-proof, but it also boasts a crazy 20.7-megapixel camera. And while more megapixels don't necessarily mean better photos, our selfies have seriously never looked so sharp. Whoa, we should really get that mole looked at. **\$0 upfront at launch, [tmobile.com](http://tmobile.com)**
